Telluy

We are flexible in working after-hours and outside of contracted support times.

Effective IT Means It All Works Together

Today's firms rely on a complex weave of technology. There are workstations, servers, networks, remote devices, and other IT infrastructure that has to operate correctly every day. When just one component fails, business problems of substantial nature may occur.

Telluy weaves technology together to provide a unified, effective IT platform. In combination with end-user assistance and help desk services, we increase the value of a firm's IT platform. Our clients depend on us to make sure their technology is a firm asset, not a liability.

Telluy hires locally. Our clients will not be calling a help desk located in another city.

IT Efficiency Improvements Matter

How a firm's staff uses technology is as important in achieving IT success as the actual infrastructure. For example, there are potential risks related to security protocols not being followed. A lack of end-user proficiency with their computers can cost companies employee time and money.

Our end-user assistance and IT Help Desk support services are designed to specifically enable the firm's employees to get the most out of their computing equipment. We are security hawks and make sure our clients' IT infrastructure is monitored and protected 24x7.

Telluy

We are business-technologists. Our team understands how to work within budgets.

IT Investments Must Produce Results

Investments in IT are necessary, but no company wants to spend money needlessly. Inefficient IT operations can cost companies money both at the equipment procurement layer and through lost workforce time. We understand the goal is to spend the right amount of money and no extra.

Telluy pays attention to the financial side of IT. We provide support contracts that feature fixed, predictable costs. Our projects are kept lean. Telluy technologies are implemented to increase Return on Investment and not expend money just for technology's sake.

Telluy has a technical CEO. He provides executive-level technology perspectives.

Advanced IT | Competitive Advantage

Some firms choose to linger in the past with technologies that are outdated, ineffective, and inefficient. There are exciting opportunities with advanced technologies, including Voice over IP, Cloud usage, high-speed networks, and remote workforce enablement.

We are experts in the advanced technologies that are proven best-fits for small to medium-sized businesses. Yet, we bring only reliable technologies to the table for consideration. Consistently, our focus is to deliver competitive a advantage driven by leading-edge IT.
